Instructor Guide

Everything an instructor does on PhysioGuidance — become a trainer, build courses, upload content, run live Zoom sessions and webinars, mark attendance, grade assessments, approve certificates, and support students at risk.

PREPARED FOR

PhysioGuidance Instructors

13. Support tickets and Looped-in tickets
14. Settings — profile, security, notifications
15. Rules that never change
16. Frequently asked questions
17. Where to look next

1. Become an instructor — the OTP trainer application

The trainer application is fully self-serve and requires **no account and no login**. A prospective instructor visits the public page and is guided by one-time codes sent to their email. Only an admin can approve or reject the application. Managers cannot approve trainer applications.

1.1 The public flow

The application lives at `/[locale]/become-trainer`. It uses a captcha on the first step to block bots and then verifies email ownership with a 6-digit one-time password.

Behind the scenes:

- `POST /trainer-applications/request-otp` accepts the captcha token plus email and emails a 6-digit code.
- `POST /trainer-applications/verify-otp` exchanges the code for a short-lived JWT scoped to purpose `trainer-application`.
- `POST /trainer-applications/submit` posts the form using the scoped JWT. The email address is taken from the JWT, not from the body, so an applicant cannot submit for someone else.

1.2 The applicant self-serve portal

Once the form is in, the applicant can check status or resubmit through the same email-driven portal:

- `POST /portal/request-otp` and `POST /portal/verify-otp` return a scoped JWT with purpose `trainer-application-portal`.
- `GET /portal/status` returns the current status: `NEW`, `UNDER_REVIEW`, `MORE_INFO`, `APPROVED`, or `REJECTED`.
- `POST /portal/resubmit` is only enabled when the status is `MORE_INFO`. The updated form replaces the earlier submission.

1.3 What happens on approval

When an admin approves the application, `role_requests.profileData` seeds a new user row. The applicant is emailed a login link. From the first sign-in, the sidebar lands on `/dashboard/instructor`.

---

2. Instructor dashboard home

The dashboard at `/dashboard/instructor` is the operations cockpit. It is composed of nine widgets, each backed by a real API. The dashboard summary itself is served by `GET /instructor/dashboard-summary`.

2.1 Widget guide

Widget	What it shows	Data source
Instructor KPI Cards	Active courses, total students, sessions scheduled today, count of at-risk learners	`GET /instructor/dashboard-summary`
Recent Feedback	Overall rating and the newest instructor reviews	`GET /instructor/me/reviews`
My Lectures (week strip)	This week's sessions with Start, End, Attendance, and Share buttons	Sessions API
Course Performance	Attendance trend, module progress, pass and fail counts	Course analytics
Assessment Analysis	Attempts, average scores, item flags	Assessments analytics
Instructor Tabs	Quick content upload and quick report download	Materials and Reports
Notifications	System notifications for the instructor	Notifications API
Assessments Needing Attention	Assessments with ungraded submissions or flagged items	Assessments API
At-Risk Learners	Students under attendance, score, or inactivity thresholds	`GET /instructor/at-risk`

2.2 Inline lecture actions

The My Lectures widget lets the instructor act on today's sessions without leaving the dashboard:

- **Start** posts to `POST /sessions/:id/start` and opens the Zoom `zoomStartUrl` in a new tab.
- **End** posts to `POST /sessions/:id/end`.
- **Attendance** opens the roster for that session.
- **Share** copies the session join URL for a student channel.

While any of today's sessions is live, the widget polls every 5 seconds so attendance counters and Zoom state stay current.

---

3. My Courses — build, edit, submit for review

The My Courses page at `/dashboard/instructor/courses` lists every course the instructor owns. It supports grid and list views, keyword search, filters by delivery type and status, and pagination. Row buttons deep-link into the course detail page with the correct tab pre-selected, for example `?tab=analytics` or `?tab=settings`.

3.1 Create a course — the 4-step wizard

Creation happens at `/dashboard/instructor/courses/create`. Every new course is created in `draft` status.

- **Step 1 — Basic info**: title, `titleAr`, description, `descriptionAr`, thumbnail, `deliveryType` (one of `zoom`, `onsite`, `blended`, `self-paced`, `webinar`), `isCmeAccredited`, `cmeHours`.
- **Step 2 — Schedule**: `startDate`, `endDate`, `enrollmentDeadline`, `maxEnrollment`. Setting `deliveryType` to `self-paced` sets `isSelfPaced = true` and hides these fields.
- **Step 3 — Modules**: add module titles and outlines. Materials are attached later from the Content Management screen.
- **Step 4 — Review**: read-only summary before submit.

Pricing lives with the basic info: `pricingType` is either `free` or `paid`, and a `price` value applies when paid.

3.2 Course detail page

Opening any course leads to `/dashboard/instructor/courses/[courseId]`. This is the largest single screen an instructor uses. Tabs:

- **Overview** — headline stats and quick actions.
- **Modules & Materials** — reorder modules, attach materials, mark preview items.
- **Enrollments** — read-only for the instructor. Removing or manually enrolling students is a manager or admin action.
- **Assessments** — link out to the assessments builder scoped to this course.
- **Sessions** — the same session table used on the Sessions page, filtered to this course.
- **Reviews** — read-only list of student reviews.
- **Audit Log** — a chronological record of every change made to the course.

The Reviews tab is also reachable directly at `/dashboard/instructor/courses/[courseId]/reviews` with pagination and filters. Moderation of reviews (hiding, unhiding, replying on behalf of the platform) is a manager and admin capability.

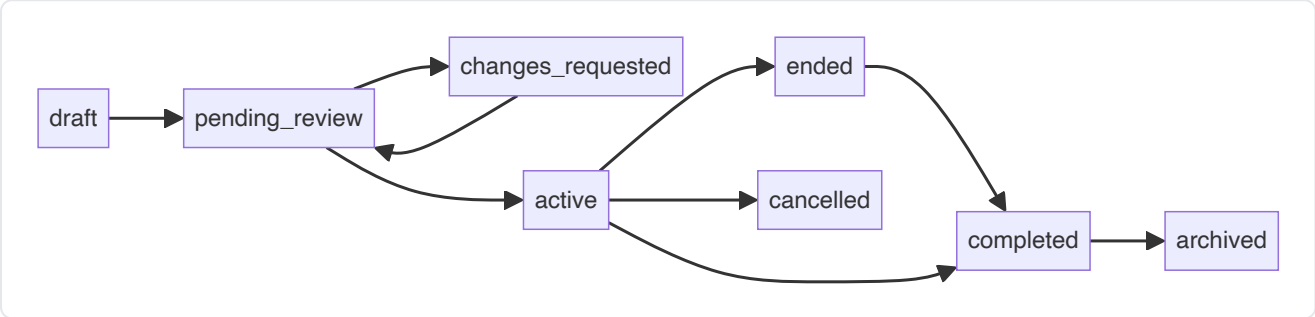

3.3 Submit for review

Once the course draft looks right, the instructor clicks **Submit for review**. This posts to `POST /courses/:id/submit-review` and moves the course from `draft` to `pending_review`. If a manager pushes the course back with `changes_requested`, the same button reappears — after edits, submit again to return to the queue.

---

4. The course lifecycle — what instructors do and what managers do

Course status is an enum: `draft`, `pending_review`, `changes_requested`, `active`, `ended`, `completed`, `archived`, `cancelled`. The server enforces role gates on every transition, so the UI only shows buttons an instructor is allowed to press.

4.1 The transition table — memorize this

Transition	Endpoint	Instructor allowed
Draft to Pending Review	`POST /courses/:id/submit-review`	Yes
Changes Requested to Pending Review	`POST /courses/:id/submit-review`	Yes
Pending Review to Active	`POST /courses/:id/activate`	Manager or Admin
Pending Review to Changes Requested	`POST /courses/:id/request-changes`	Manager or Admin
Active to Ended	`POST /courses/:id/end`	Manager or Admin
Active or Ended to Completed	`POST /courses/:id/complete`	Manager or Admin
Active to Cancelled	`POST /courses/:id/cancel`	Manager or Admin
Reschedule or revive	`POST /courses/:id/reschedule`	Manager or Admin
Completed to Archived	`POST /courses/:id/deactivate`	Manager or Admin
Reassign instructor	`PATCH /courses/:id/assign-instructor`	Manager or Admin
Delete	`DELETE /courses/:id`	Manager or Admin
Toggle featured	`PATCH /courses/:id/feature`	Manager or Admin
Edit settings	`PATCH /courses/:id`	Instructor — but only while status is `draft` or `changes_requested`
Module create, update, delete, reorder	`POST/PATCH/DELETE /courses/:id/modules[/:mid]`, `PATCH /courses/:id/modules/reorder`	Yes
Duplicate	`POST /courses/:id/duplicate`	Endpoint exists

4.2 The two rules that surprise new instructors

1. **Once a course is Active, its settings are locked to the instructor.** The server refuses `PATCH /courses/:id` when the status is not `draft` or `changes_requested`. If a running course needs a

change (a new start date, a corrected description), the instructor asks a manager to make the edit, or the manager rolls the course back to `changes_requested`.

2. **Ending a course does not unlock certificates.** Only **Mark Completed**, a manager or admin action, opens the door to certificate generation, CME hours, xAPI statements, and public reviews. A course that has merely ended is still not complete.

4.3 Duplicate

The `POST /courses/:id/duplicate` endpoint is present on the backend for future duplication workflows. It is available server-side today.

---

5. Content Management — upload, replace, caption, analyze

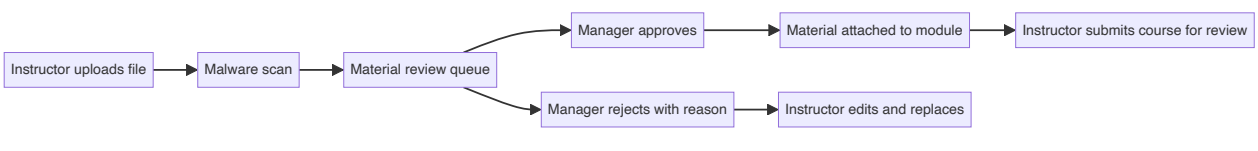

The Content page at `/dashboard/instructor/content` is where course materials live. It supports drag-and-drop upload, in-place replace with versioning, rollback to earlier versions, and delete. Every uploaded file passes through the malware scanner pipeline before students can access it.

5.1 Supported material types and size limits

Type	Max size	Notes
video	500 MB	Watch analytics available
pdf	50 MB	Streamed inline in the player
document	50 MB	Office formats
image	20 MB	Thumbnails auto-generated

5.2 The upload and approval flow

Every uploaded material enters a manager review queue. It becomes visible to students only after a manager or admin approves it. The instructor can still Submit-for-Review for the whole course only after each material has been approved.

5.3 Endpoints the instructor uses

- `POST /courses/:id/materials` — upload a new material into a module.

- `GET /courses/:id/materials` — list materials in a course.
- `PATCH /courses/:id/modules/:moduleId/materials/reorder` — reorder within a module.
- `PATCH /materials/:id` — update metadata.
- `POST /materials/:id/replace` — upload a replacement (creates a new version).
- `DELETE /materials/:id` — delete a material.
- `GET /materials/:id/status` — scan and processing status.
- `GET /materials/:id/variants` — encoded video variants and image sizes.
- `GET /materials/:id/watch-analytics` — powers the video retention chart.
- `GET /materials/:id/captions`, `PUT /materials/:id/captions`, `POST /materials/:id/captions/upload` — VTT and SRT captions for WCAG compliance.
- `GET /materials/:id/versions` and `POST /materials/:id/rollback/:versionId` — versioning.

5.4 Video retention and captions

Videos come with two accessibility and analytics tools:

- **Watch analytics** power a retention chart, so an instructor can see where students drop off and edit or replace the video accordingly.
- **Caption editor** lets an instructor either upload a VTT or SRT file or type captions inline. Captions are required for WCAG conformance and for NELC accessibility evidence.

---

6. Sessions and Zoom — create, start, end, finalize

Sessions are the live meeting units. They live inside a course and are visible on three surfaces: the standalone Sessions page at `/dashboard/instructor/sessions`, the Sessions tab of the course detail page, and the My Lectures widget on the dashboard.

6.1 What an instructor can do with a session

- Create a session for any non-webinar delivery type — this auto-creates a Zoom meeting and stores `zoomStartUrl` and `zoomJoinUrl`.
- Update a session's title, agenda, and settings.
- Start the session (opens Zoom as host).
- End the session (stops the meeting and records the end time).
- Finalize the session, which locks the attendance list.
- Cancel a session with a required reason.
- Reschedule a session with a reason and a new time.
- Force a Zoom attendance sync when the automatic sync is delayed.

- View the attendance log, including unmatched Zoom guests (people who joined but the system could not map to a registered student).
- View the Zoom cloud recording once ready.
- Share or unshare course materials to a specific session.
- Assign a session TA and update the TA's role for that session.

6.2 What an instructor cannot do with a session

- Create a session under a course whose `deliveryType` is `webinar` — that path is gated to manager and admin in `sessions.service.ts`.
- Delete a session.
- Assign a substitute instructor for an entire session.
- Cancel or reschedule on behalf of another instructor's course.

6.3 Attendance mechanics

Attendance is captured in three ways and consolidated on the session record:

- Automatic Zoom sync uses the Zoom REST API to pull the join and leave times and matches them to enrolled students by email.
- **Bulk mark**: `POST /sessions/:id/attendance/bulk` for large sessions or make-up corrections.
- **Per-student mark**: `POST /sessions/:id/attendance`.
- **Update a record**: `PATCH /attendance/:id`.
- **Finalize**: `POST /sessions/:id/finalize` locks the record. No further edits are accepted through the standard endpoints once finalized.

---

7. Webinar delivery — registration questions and host controls

A course with `deliveryType = webinar` uses the Zoom Webinars product rather than Zoom Meetings. Because webinar sessions require additional configuration, the creation of webinar sessions is a manager or admin capability. The instructor still runs the webinar as host and sees registrant data read-only.

7.1 Standard registration questions

Every webinar session is created with a standardized registration form so exports are consistent across the platform:

Field	Requirement
Phone	Optional
National ID or Iqama	Required
SCFHS number	Optional

7.2 The auto-registration bridge

The moment a student enrolls in a webinar course, a post-enrollment hook registers them with the Zoom webinar automatically, using the profile fields they already provided. This means students never see a second Zoom registration form.

7.3 What the instructor sees

- `GET /sessions/:id/registrants` — read-only list of webinar registrants, useful for pre-webinar preparation.
- `GET /sessions/:id/webinar-start` — start-as-host link. Clicking it opens Zoom as the panelist host.
- Attendance, recording, and analytics work the same as for a Zoom meeting session.

Reconfiguring webinar registration questions or migrating a course between meeting and webinar delivery are manager and admin operations.

---

8. Assessments — question bank, grading, analytics

Assessments are the second-largest surface after courses. The page at `/dashboard/instructor/assessments` lists every assessment the instructor owns, with detail pages for each.

8.1 Full CRUD

Instructors can create, list, view, update, and delete assessments. Delete is only allowed while the assessment is still in draft. Each assessment supports:

- Multiple question types.
- Per-question Arabic text so the assessment renders correctly in both locales.
- Per-option correct-flag for multiple choice.
- Attempt limits, time limit, and passing score.

8.2 Grading

- **Quiz submissions** are graded automatically for objective questions. Manual review uses `PATCH /assessments/:id/submissions/:sid/grade`.
- **Assignment submissions** accept files up to 100 MB in PDF, Office, and image formats. Grade with `PATCH /assessments/:id/submissions/:sid/grade-assignment`, which stores the score and instructor feedback.

8.3 Analytics

Four analytics endpoints back the assessment insights:

Endpoint	What it delivers
`GET /assessments/:id/item-analysis`	Per-question discrimination, difficulty, response distribution
`GET /assessments/:id/difficulty-distribution`	Histogram of item difficulties for the whole assessment
`GET /assessments/blueprint/:courseId`	Blueprint coverage — which learning objectives are and are not covered
`GET /assessments/course-bank/:courseId/questions` and `POST` counterpart	Course-level shared question bank

8.4 What is scoped to manager and admin

Three specific assessment actions are not available to instructors and instead sit with managers and admins:

- Flag an assessment for review.
- Emergency override of a submission score.
- Grant an individual student a retake outside the normal attempt limits.

An instructor who needs any of these opens a support ticket to their manager.

---

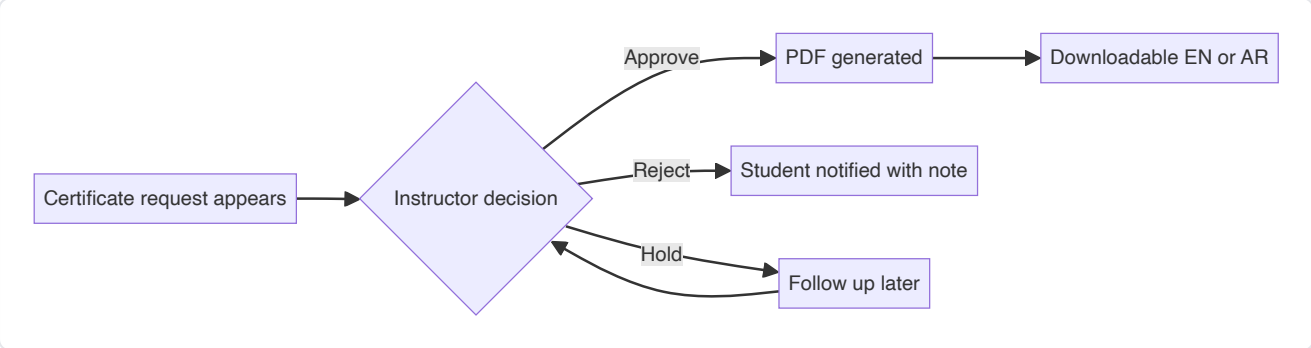

9. Certificates — approve, reject, hold, batch

The certificate console lives at `/dashboard/instructor/certificates`. It is deep-linked rather than in the sidebar because it is not a daily-driver screen, but the instructor has substantial powers here.

9.1 What an instructor can do

- Create a certificate request on behalf of a student.

- View the pending queue with search and filters.
- Open any request for full context — enrollment record, attendance, grades, CME hours.
- **Approve** a request with `PATCH /certificates/:id/approve`, which generates the PDF.
- **Reject** a request with a note, `PATCH /certificates/:id/reject`.
- **Hold** a request with a note (for follow-up), `PATCH /certificates/:id/hold`.
- **Batch approve or reject** with `POST /certificates/batch`.
- **Batch download** the approved PDFs as a ZIP with `POST /certificates/batch-download`.
- **Single download** in English or Arabic with `GET /certificates/:id/download?lang=en` or `?lang=ar`.

9.2 Revocation is manager or admin only

Once a certificate is issued, the only way to invalidate it is `PATCH /certificates/:id/revoke`, which is scoped to manager and admin. An instructor who spots a problem with an issued certificate should route the case to their manager with the details.

---

10. Students, at-risk learners, and interventions

The Students screen at `/dashboard/instructor/students` lists every student across every course the instructor teaches, with filters for course, status, and search.

10.1 Student detail

Opening a student opens `/dashboard/instructor/students/[studentId]` and shows:

- Enrollment history across the instructor's courses.
- Attendance summary per course.
- Score summary per assessment.
- Timeline of interventions.

The list is backed by `GET /instructor/students?courseId=` and the detail by `GET /instructor/students/:id`.

10.2 At-risk learners

At-risk learners are surfaced on the dashboard and on their own screen. The endpoint is `GET /instructor/at-risk`. Thresholds are configurable per course by the instructor with `PATCH /instructor/courses/:courseId/at-risk-settings`. The tunable fields are:

- `atRiskAttendanceThreshold` — a percentage below which the student is flagged.
- `atRiskScoreThreshold` — an assessment score below which the student is flagged.
- `atRiskInactivityDays` — number of days of inactivity that flags the student.

10.3 Interventions and make-up sessions

Instructors record their outreach as **interventions**:

- `POST /instructor/interventions` — create an intervention with type, notes, and follow-up date.
- `GET /instructor/students/:studentId/interventions` — full list for a student.

When a student misses a session and the schedule allows, the instructor can offer a **make-up session** with `POST /instructor/students/:studentId/makeup-session`.

10.4 Enrollments — the two sides

The Enrollments tab on a course is read-only for the instructor. Separately, the instructor can:

- View course enrollments: `GET /courses/:id/enrollments`.
- Self-enroll a student: `POST /courses/:id/enroll`, subject to NELC capacity checks. If the course is at capacity, the enrollment attempt is blocked.
- View and manage the waitlist for a course.

Two enrollment actions sit with managers and admins:

- Bypass capacity: `POST /courses/:id/manual-enroll` — used when the manager approves an over-capacity exception.
- Remove an enrolled student: `DELETE /courses/:id/enrollments/:studentId`.

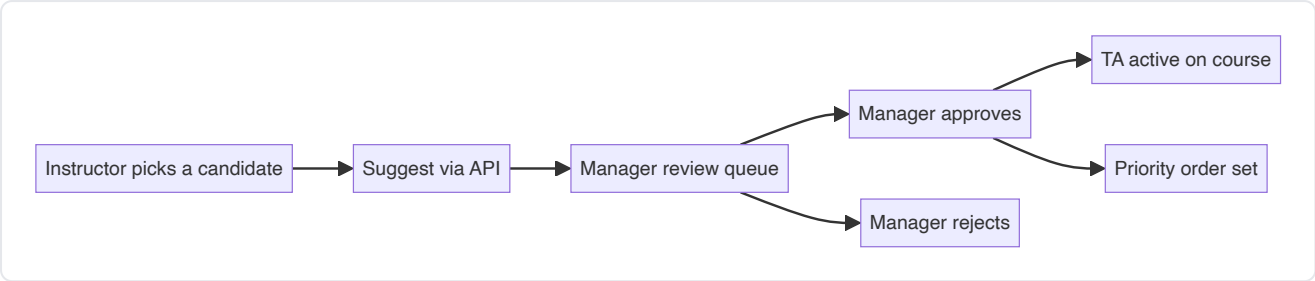

---

11. Course TAs and Session TAs

There are two distinct TA models, and they behave very differently.

11.1 Course TA — instructor suggests, manager approves

An instructor **suggests** a course TA. The suggestion goes into a manager approval queue. Only a manager or admin can confirm the TA on the course.

Endpoints:

- `POST /courses/:courseId/assistants/suggest` — instructor suggests a TA.
- `PATCH /courses/:courseId/assistants/:userId/approve` — manager or admin approves.
- Reads shared by instructor and manager: `GET /courses/:courseId/assistants`, `.../threshold-status`, `.../available`.

Threshold-status is the endpoint the UI uses to warn when a course is understaffed relative to its enrollment.

11.2 Session TA — instructor assigns directly

At the session level, the instructor is in charge. There is no approval loop.

- `POST /sessions/:sessionId/assistants` — assign a TA to a session.
- `DELETE /sessions/:sessionId/assistants/:userId` — remove a TA.
- Update the TA's role for the session with the same assistants endpoints.

This split — course TAs approved by managers, session TAs assigned by instructors — mirrors the way academic departments handle staffing versus classroom logistics.

---

12. Reports and scheduled exports

The Reports screen lives at `/dashboard/instructor/reports`. Like Certificates, it is deep-linked and not in the sidebar. The backend gates the controller with `Roles(INSTRUCTOR, TA, ADMIN, MANAGER)`, so every one of these ten reports is available to the instructor.

12.1 The report catalog

Report	Purpose
Attendance	Per-session and per-student attendance rows
Gradebook	All assessment scores in one export
Enrollment	Roster with statuses and dates
Completion	Progress towards course completion
CME Eligibility	Who qualifies for CME hours and how many
Webinar Registrants	Zoom registration data
Satisfaction	Student review distribution
Instructor Performance	Aggregate metrics for the instructor
NELC Compliance	Attendance percentages and evidence for NELC audit
Course Catalog	Snapshot of the instructor's courses

Every report supports CSV, PDF, and XLSX formats, with date range, course, session, and timezone filters. Rows containing personal data respect the platform's PDPL masking rules.

12.2 Generic export table

For ad-hoc analysis, the generic `POST /instructor/reports/export-table` accepts a table specification and returns the file in the requested format.

12.3 Scheduled reports

Instructors can schedule any report to run on a cadence, with the file delivered to their email:

- `GET /instructor/reports/scheduled` — list the instructor's scheduled reports.
- `POST /instructor/reports/scheduled` — create one.
- `PATCH /instructor/reports/scheduled/:id` — edit a schedule.
- `DELETE /instructor/reports/scheduled/:id` — remove one.

The revenue report sits with managers and admins, since financial totals are managed at the finance level.

---

13. Support tickets and Looped-in tickets

Instructors participate in the same ticketing system that students and support agents use, in two roles.

13.1 File and manage own tickets

At `/dashboard/instructor/support` the instructor can:

- File a ticket to the support team with `POST /tickets`. Any authenticated user can do this.
- List their own tickets.
- Reply to a ticket thread.
- Rate a resolved ticket.

13.2 Tickets where the instructor is looped in

At `/dashboard/instructor/support/looped-in`, the instructor sees tickets where they have been added as a collaborator by a support agent. This is powered by `GET /tickets/looped-in`. Typical scenarios: a student asked support a question that only the instructor can answer, or a manager wants the instructor to weigh in on a scheduling change.

13.3 What is scoped to support and admin

The full support back-office — macros, knowledge base writes, SLA settings, CSAT dashboards, tag rules, and KPI dashboards — sits with the support role and admin. Instructors read the tickets they are on, but do not configure the support system itself.

---

14. Settings — profile, security, notifications

The Settings screen at `/dashboard/instructor/settings` has exactly three tabs.

14.1 Profile

- Name, phone, avatar upload and remove.
- Arabic name fields for the Arabic locale.
- **Professional info block** (unique to instructors): profession, specialty, qualification, bio, Twitter, LinkedIn.

The professional info surfaces on public course pages next to the instructor's photo.

14.2 Security

- Password change with strength meter.
- Two-factor authentication enable, disable, and recovery codes.
- Trusted devices list with the ability to revoke a session on any device.

14.3 Notifications

Two master switches: **email** and **in-app**. When email is off, no email notifications are sent regardless of event type. When in-app is off, the notification bell is disabled. These are the same two switches students see.

---

15. Rules that never change

These are enforced server-side. They will not be different depending on which browser or which manager is on shift.

1. An instructor cannot edit a course once its status is `active`. Edits are allowed only in `draft` and `changes_requested`.
2. Every material must be approved by a manager or admin before the instructor can submit the course for review.
3. Only admin and manager can mark a course as **Completed**. That transition — not the End action — is what generates certificates, awards CME hours, emits xAPI statements, and opens reviews.
4. Only admin and manager can cancel a course. Cancellation cascades refunds and notifications.
5. Only admin and manager can delete a course, reschedule it, or deactivate it into the archive.
6. An instructor **suggests** a course TA; only a manager or admin confirms. An instructor **assigns** a session TA directly.
7. An instructor cannot create sessions under a course whose `deliveryType` is `webinar`. Webinar sessions are provisioned by managers and admins.
8. An instructor can approve, reject, or hold a certificate request, but only a manager or admin can revoke an issued certificate.
9. The trainer application is fully unauthenticated: OTP by email, no login until approval. Approval is admin-only.

---

16. Frequently asked questions

1. I finished my course draft — how do I make it live? Click **Submit for review** on the course detail page. A manager reviews and clicks **Activate**. You will see the status change to `active` and the course will appear in the public catalog.

2. My course is Active and I need to fix a typo in the description. What do I do? Ask a manager to either edit the field directly or roll the course back to `changes_requested`. The server refuses direct edits while the status is `active`.

3. I uploaded a video an hour ago and it is not showing up for students. Why? Materials pass through a scan and a manager review queue. Check the status column on the Content page — if it shows `pending review`, ping your manager.

4. My session is over. Why is the certificate button greyed out? Ending a session or ending a course does not trigger certificates. Ask a manager to mark the course as **Completed**. That is the transition that unlocks certificate generation, CME hours, and reviews.

5. Can I run a webinar for my next course? Yes. When you create the course, set `deliveryType` to `webinar`. Your manager will provision the webinar sessions with the standard registration questions. You will run the webinar as host and see the registrants list read-only.

6. A student wants a make-up for the session they missed. Do I need a manager? No. Open the student's profile and use the make-up session action. The system records the make-up and it counts towards attendance the same way.

7. I want a TA on my course. What do I do? On the course detail page, suggest a TA. The suggestion goes to your manager. Once approved, the TA appears on the course. For a single session, you can assign a session TA directly without approval.

8. How do I know which students are at risk? The dashboard widget lists them, and the standalone screen adds filters. If your defaults are too aggressive or too lenient, tune them per course with the at-risk settings — attendance threshold, score threshold, and inactivity days.

9. Can I revoke a certificate I approved by mistake? No. Contact a manager or admin; revocation is their action. Include the certificate ID and the reason so they can process it.

10. Where do I download the attendance report for last month? The Reports screen at `/dashboard/instructor/reports`. Pick **Attendance**, set the date range, pick the format, and download. Set it up as a scheduled report if you need it every month.

11. Can I duplicate a course to seed the next cohort? The duplicate endpoint exists in the backend. If a duplicate button is not yet on your course row, ask a manager to duplicate on your behalf.

12. A student says they cannot see a module. What do I check? Confirm the material is approved by the manager, confirm the module is not marked as hidden, and confirm the student's enrollment status is `active`. The audit log on the course tells you when a module was last modified.

13. What happens when I click Start on a Zoom session? The backend posts to `POST /sessions/:id/start` and opens the Zoom `zoomStartUrl` in a new tab. You join as the host. The status on the dashboard flips to Live and the widget refreshes every 5 seconds.

14. My name is not showing correctly in Arabic on the public course page. Where do I fix that? Settings, Profile tab. Fill in the Arabic name fields and your specialty, and save. The public page updates on the next render.

15. Do I get notifications when a student submits an assessment? Yes, as long as the master notification switches in Settings are on. The Assessments Needing Attention widget also lists ungraded submissions across your courses.

17. Where to look next

- **Course Manager Guide** — everything your manager can do that you cannot: activate, cancel, reschedule, complete, delete, approve materials, moderate reviews, approve course TAs, revoke certificates.
- **Admin Guide** — trainer application approval, role changes, deep platform settings, and monitoring.
- **Student Guide** — the view your students see, so you can walk them through it.
- **API Reference** — the exact endpoint list, including request and response shapes.
- **NELC Compliance** — how attendance, capacity, and CME hours map to the regulator's audit evidence.
