Instructor Dashboard

Feature Explanation Guide

PhysioGuidance — Roya Almustaqbal for Health Training

NELC-Compliant eLearning Platform • Bilingual AR/EN • WCAG 2.1 AA

Purpose	Explain every feature, widget, and user flow in the instructor dashboard
Audience	Developers, QA testers, product owners, stakeholders
Pages Covered	11 pages — Dashboard Home, Courses, Sessions, Students, Assessments, Content, Certificates, Reports, Settings
Components	27 UI components — all pre-built, ready for backend wiring
Authorization	All features restricted to INSTRUCTOR role only

Table of Contents

Right-click → Update Field in Word to refresh page numbers.

1. Dashboard Home — The Command Center

Page: (dashboards)/dashboard/instructor/page.tsx

The dashboard home is the first screen instructors see after login. It provides a real-time operational overview of everything that matters today — upcoming sessions, student performance, at-risk learners, and pending certificate reviews. Think of it as a morning briefing for the instructor.

1.1 KPI Cards (Top Row)

Four metric cards displayed across the top of the dashboard, giving an instant pulse check:

Card	What It Shows	Data Source	Why It Matters
Active Courses	Count of courses with status='active'	GET /courses (filtered)	Shows current teaching load
Today's Sessions	Count of sessions scheduled for today	GET /sessions/today	Immediate action items
Total Students	Unique enrolled students across all courses	Aggregated from enrollments	Reach metric
At-Risk Learners	Students flagged by at-risk criteria	GET /instructor/at-risk	Urgency indicator — needs attention

1.2 Today's Sessions Widget

Shows all sessions scheduled for the current day, ordered by time. Each session card displays:

- Session title and course name
- Scheduled time and duration
- Delivery type indicator: Zoom icon (online), building icon (on-site), or hybrid icon
- Expected attendance count vs enrolled students
- Zoom link or room/venue information
- **One-Click Start button** — changes session status from 'scheduled' to 'live', records the actual start time

User Flow: Instructor arrives at 9am → sees 'Advanced Physical Therapy — 9:30 AM' → clicks 'Start' at 9:28 → status changes to LIVE → Zoom link copied to clipboard → attendance tracking begins.

1.3 Course Performance Widget

A chart-based widget showing enrollment trends and completion analytics for the instructor's active courses:

- 7-day enrollment trend line chart
- Completion rate per course as horizontal progress bars

- Drop-off analysis showing where students exit (which module/video)
- Comparison: this week vs last week

1.4 Assessment Analysis Widget

Summarizes assessment performance across all active courses:

- Average scores per assessment/module
- Pre-test vs post-test delta (measuring learning improvement)
- Quick stat: number of submissions pending grading

1.5 At-Risk Learners Widget

Critical feature for NELC compliance — the platform must proactively identify and support struggling students.

Displays students who meet ANY of these criteria:

Risk Type	Criteria	Badge Color	Suggested Action
Low Attendance	Attendance < 70% across all sessions	Red	Send reminder email / schedule make-up session
Low Score	Assessment average < 60%	Orange	Offer additional resources / review session
Inactive	No platform activity in last 7 days	Yellow	Send engagement email / check-in

Each student card shows: name, photo, enrolled course, specific risk type, and action buttons (Send Reminder, Schedule Make-up, Open Ticket).

1.6 Certificate Queue Widget

Shows pending certificate requests that need instructor review. Displays: student name, course, eligibility status (attendance %, assessments passed, course completed), and approve/reject buttons. Badge count indicates how many are waiting.

1.7 Calendar Widget

Mini monthly calendar with dots on days that have scheduled sessions. Clicking a date reveals sessions for that day. Color-coded: blue = upcoming, green = completed, red = cancelled.

1.8 Recent Feedback & Notifications

Two smaller widgets: Recent Feedback shows the latest student ratings and comments. Notifications shows platform alerts (new enrollment, session reminder, certificate approved). Both use polling or WebSocket updates.

2. My Courses — Course Portfolio

Page: instructor/courses/page.tsx

A grid/list view of all courses owned by the instructor. This is the entry point for course management.

2.1 Course Cards

Each course displays as a visual card with:

- Thumbnail image (uploaded or auto-generated)
- Course title (in current language — AR or EN)
- Delivery type badge: Zoom / On-site / Blended
- Status badge: Draft (gray), Active (green), Completed (blue), Archived (dark)
- Quick stats: enrolled students count, completion rate, average rating
- Date range (start date – end date)

2.2 Filters & Search

- Status filter: Draft / Active / Completed / All
- Delivery type filter: Zoom / On-site / Blended / All
- Search bar: real-time search by course title (debounced 300ms)
- Sort: Newest first, Oldest first, Most enrolled, Alphabetical
- View toggle: Grid view (cards) / List view (table)

2.3 Create Course Flow

The 'Create Course' button opens a multi-step form:

Step	Fields	Validation
Basic Info	Title (EN), Title (AR), Description (EN/AR), Delivery type, Thumbnail upload	Title required, delivery type required
Schedule	Start date, End date, Max enrollment	End date > start date
Modules	Add/reorder modules: title, type (video/doc/quiz), estimated duration	At least 1 module recommended
Review	Preview all settings before publishing	Saves as 'draft' by default

3. Course Detail — 6-Tab Deep Dive

Page: instructor/courses/[courseId]/page.tsx

When an instructor clicks into a course, they see a detailed view organized into 6 tabs. Data loads lazily — only when a tab is selected.

3.1 Overview Tab

Course summary card: title, description, delivery type, status, date range, enrollment count, completion rate, average rating. Edit button opens inline editing.

3.2 Modules Tab

Ordered list of course modules with drag-and-drop reordering. Each module shows: title, type icon (video/document/quiz/mixed), estimated duration, and material count. Actions: add new module, edit, delete, reorder.

3.3 Students Tab

Enrolled students table: name, email, enrollment date, progress bar (0-100%), status (active/completed/dropped), last activity. Click a student to navigate to their detail page.

3.4 Sessions Tab

All sessions for this specific course. Shows: date, time, type, status, attendance count. Quick actions: schedule new session, start session, view attendance.

3.5 Analytics Tab

Course-level analytics computed from enrollment and attendance data:

- Enrollment funnel: views → enrolled → active → completed
- Completion rate: percentage of enrolled students who finished
- Drop-off rate: where students abandon (by module)
- Average progress across all enrolled students
- Attendance rate: average attendance percentage across sessions
- Assessment performance: average scores, pass/fail rates

3.6 Settings Tab

Edit course form: update title, description, delivery type, dates, max enrollment, thumbnail. Status management: activate draft, complete active, archive completed. Danger zone: delete (only drafts).

4. Sessions — Schedule & Deliver

Page: instructor/sessions/page.tsx

The sessions page is the operational hub for all live teaching activities. Two views: list and calendar.

4.1 List View

Sessions grouped into three sections:

Section	Content	Actions Available
Today	Sessions scheduled for today, sorted by time	Start, Cancel, View Attendance
Upcoming	Future sessions, sorted by date	Edit, Cancel, Copy Zoom Link
Past	Completed/cancelled sessions	View Attendance Report, Download

4.2 Calendar View

Monthly calendar with session dots. Color-coded: blue (scheduled), green (completed), red (cancelled), orange (live now). Click a day to see sessions. Click a session to view details.

4.3 Schedule Session Modal

A modal/form for creating new sessions:

- Course selection (dropdown populated from instructor's courses)
- Session title
- Date picker + time picker + duration (30/60/90/120 min or custom)
- Type: Zoom / On-site / Hybrid
- If Zoom: paste meeting link (or auto-generate with Zoom integration in Phase 2)
- If On-site: room name + venue address
- Conflict detection: warns if another session overlaps

4.4 Session Lifecycle

Status	How It's Set	What Happens
Scheduled	On creation	Appears in calendar, students can see upcoming session
Live	Instructor clicks 'Start'	actualStartedAt = NOW(), attendance tracking begins
Completed	Instructor clicks 'End'	actualEndedAt = NOW(), attendance finalized
Cancelled	Instructor cancels with reason	cancelReason stored, students notified

4.5 Attendance Tracking

When a session is live or completed, the instructor can mark attendance:

- Bulk mark: select all students, mark as present/absent/late/excused in one click
- Individual mark: click each student's status toggle
- Late/excused requires a note (reason)
- Records: joinedAt, leftAt, durationMinutes for detailed tracking
- Minute-level attendance for NELC evidence export

5. Students — Monitor & Support

Page: instructor/students/page.tsx + instructor/students/[studentId]/page.tsx

5.1 Students List

Aggregated view of ALL students enrolled across the instructor's courses. Table columns: name, email, enrolled courses count, overall progress, attendance rate, assessment average, risk status, last active.

- Search by name or email
- Filter by course, by enrollment status (active/completed/dropped), by risk level
- Sort by name, progress, attendance, last active
- At-risk badge (red/orange/yellow dot) shown inline

5.2 Student Detail Page (4 Tabs)

Tab	Content	Key Data Points
Overview	Student profile + enrollment summary across all instructor's courses	Total courses, average progress, average attendance, average score
Attendance	Session-by-session attendance records for each enrolled course	Status per session, total rate, late count, absent count
Assessments	Assessment scores across all courses	Each assessment score, pass/fail, grade, average compared to class
Activity	Timeline of student actions (future: activity log)	Last login, recent actions, engagement score

6. Assessments — Evaluate & Analyze

Page: instructor/assessments/page.tsx

Comprehensive assessment management with 4 tabs covering the full lifecycle from question creation to detailed item analysis.

6.1 All Assessments Tab

List of all assessments across the instructor's courses. Each assessment shows: title, course, type (quiz/exam/assignment), total marks, passing marks, status (draft/published/closed), submission count. Filter by type, status, course.

6.2 Question Bank Tab

Key concept: Questions can belong to a specific assessment OR exist in the course-level question bank (assessmentId = null). Bank questions can be pulled into any assessment.

Features:

- View all questions for a course, organized by topic/difficulty
- Filter by type (MCQ, True/False, Short Answer, Essay), difficulty (Easy/Medium/Hard)
- Create questions: type selector, question text (EN + AR), options for MCQ, correct answer, marks, difficulty tag
- Bulk import/export questions (future enhancement)

6.3 Submissions Tab

View student submissions for any assessment. Shows: student name, score, percentage, status (in_progress/submitted/graded), time taken.

- Auto-graded: MCQ and True/False questions scored automatically on submission
- Manual grading: Essay and Short Answer require instructor to review and assign marks
- Grade button opens a grading modal with the student's answers side-by-side with correct answers

6.4 Item Analysis Tab

NELC-required — instructors must be able to analyze assessment quality.

For each question in an assessment, the system computes:

Metric	Formula	Interpretation
Difficulty Index	correct_answers / total_attempts	0.0 = impossible, 1.0 = trivial. Ideal: 0.3–0.7
Discrimination Index	top_27%_correct - bottom_27%_correct	< 0.2 = poor, 0.2–0.4 = good, > 0.4 = excellent
Correct Response Rate	% of students who answered correctly	Quick quality indicator

Pre/Post Comparison	post_test_avg - pre_test_avg	Measures actual learning improvement

7. Content Management — Upload & Version

Page: instructor/content/page.tsx

Central hub for managing all course materials: videos, PDFs, documents, and images. Supports versioning, accessibility tracking, and bilingual captions.

7.1 Material Library

Grid or list view of all materials across the instructor's courses. Each material card shows:

- Thumbnail/icon based on file type (video player icon, PDF icon, etc.)
- Title, course name, module (if linked)
- File size and upload date
- Version number (v1, v2, v3...)
- Processing status: Processing (spinner), Live (green), Failed (red)
- WCAG status badge: Pending (gray), Pass (green), Warning (yellow), Fail (red)

7.2 Upload Flow

- Click 'Upload Material' → select file from device
- Choose course and optionally link to a specific module
- Enter material title
- File type validation: video/* (max 100MB), PDF (max 10MB), images (max 10MB)
- Upload progress bar shown during upload
- On complete: status = 'processing', then auto-transitions to 'live' when storage confirms

7.3 Versioning

Replace, don't delete — when an instructor updates a material, the old version is preserved.

- Click 'Replace' on any material → upload new file
- Version number auto-increments (v1 → v2)
- Previous versions linked via previousVersionId chain
- Version history viewable: date, uploader, file size for each version

7.4 Accessibility Features (WCAG/NELC)

- Captions: upload AR/EN caption files for videos (.srt/.vtt)
- Transcripts: upload AR/EN transcripts for audio/video content
- WCAG checklist: auto-checks (future) or manual checkbox — has captions? has alt text? proper contrast?
- Materials failing WCAG get a warning badge visible to course managers

8. Certificates — Review & Issue

Page: instructor/certificates/page.tsx

Instructors review and approve/reject certificate requests from students who have completed courses. This is a quality gate — not every student who finishes automatically gets a certificate.

8.1 Eligibility Criteria (Auto-Computed)

When a student requests a certificate, the system automatically computes three eligibility checks:

Check	Computation	Threshold	Badge
Attendance	count(present + late) / count(all_sessions) × 100	Must reach 70% (NELC requirement)	Green ≥ 70%, Red < 70%
Assessments	Did student pass ALL required assessments?	Score ≥ passing marks on each	Green = all passed, Red = any failed
Completion	enrollment.progress === 100?	Must be 100%	Green = complete, Red = incomplete

8.2 Review Actions

Action	When to Use	What Happens
Approve	All 3 eligibility checks pass	Certificate PDF generated, student notified, certificateUrl stored
Reject	Student doesn't meet criteria	Reason stored in reviewNote, student can see why
Hold	Edge case needs investigation	Audit note stored, appears in admin audit trail

8.3 Batch Operations

For courses with many completions, instructors can select multiple requests and batch approve or reject. Batch approve only works if all selected students meet eligibility criteria.

9. Reports — Export & Evidence

Page: instructor/reports/page.tsx

NELC compliance requirement — all reports must be exportable as evidence for audits.

9.1 Report Types

Report	Content	Use Case
Attendance Report	Student name, email, each session date, status (present/absent/late/excused), overall %	NELC evidence, identify absentees
Gradebook	Student name, each assessment score, total, percentage, pass/fail	Academic records, student advising
Enrollment Report	Enrollment date, status, progress, last activity	Track engagement, identify drop-offs
Completion Report	Students who completed, completion date, certificate status	NELC evidence, program metrics

9.2 Report Generation Flow

- Select report type from dropdown
- Select course (required — reports are per-course)
- Optionally set date range (from/to)
- Select export format: CSV, PDF, or Excel
- Click 'Generate' → loading spinner → file auto-downloads
- Each export includes: timestamp, filters used, instructor name — for audit traceability

10. Settings — Instructor Preferences

Page: instructor/settings/page.tsx

10.1 Profile Settings

- Display name (EN + AR)
- Profile photo upload
- Contact email and phone
- Bio / specialty description (shown on course pages)

10.2 Notification Preferences

- Email notifications: new enrollment, session reminder, certificate request, at-risk alert
- Toggle each on/off
- Reminder timing: 15 min / 30 min / 1 hour before session

10.3 Language & Accessibility

- Interface language: Arabic / English toggle
- Font size preference
- High contrast mode toggle
- Default captions on/off for video playback

11. Cross-Cutting Features

These features apply across ALL pages and widgets in the instructor dashboard.

11.1 Bilingual Support (AR/EN)

- Every page supports full Arabic and English rendering
- RTL layout automatically applied when language is Arabic
- All content fields have dual inputs: title (EN) + titleAr (AR)
- Language toggle in the top navigation bar
- next-intl handles all translation strings

11.2 Global Filters

Available across all data-heavy pages:

- Time range: Today / 7 days / 30 days / Custom date range
- Course filter: select specific course or all courses
- Delivery mode: Zoom / On-site / Blended
- These filters persist across page navigation within the session

11.3 Export Everywhere

Every data table and widget supports CSV/PDF export. Export includes: timestamp, active filters, user context. This satisfies NELC evidence requirements for audits.

11.4 Authorization & Data Isolation

- Every API call includes the instructor's JWT token
- Backend enforces: WHERE instructorId = currentUser.id
- Instructors CANNOT see other instructors' courses, students, or data
- Admin/Super Admin CAN see all data (for platform oversight)
- Attempting to access another instructor's data returns 404 (not 403 — to prevent enumeration)

11.5 Responsive Design

- All pages work on desktop (1200px+), tablet (768px–1199px), and mobile (< 768px)
- Sidebar collapses to hamburger menu on mobile
- Data tables become scrollable cards on mobile
- Touch-friendly: buttons minimum 44px tap target

11.6 Loading, Error & Empty States

Every page implements three states:

State	Visual	When
Loading	Skeleton placeholder (gray shimmering blocks matching layout)	While API request is in flight
Error	Red error banner with 'Retry' button	API returns error or network failure
Empty	Illustration + helpful message + action button	No data exists yet (e.g., 'No courses yet — Create your first course')

— End of Document —
