Course Manager Guide

Everything the Course Manager does on PhysioGuidance — approve courses and materials, moderate reviews, oversee sessions and instructors, run NELC compliance, manage certificates, and generate reports across the catalog.

10. Certificates — approve, reject, hold, revoke, batch
11. Reviews — course and instructor moderation
12. NELC Compliance — scorecards and audit export
13. Reports — 11 report types and scheduled exports
14. Support — filing tickets, being looped in
15. Settings — profile, security and notifications
16. Course Assistants (TAs) — attach, rank, remove
17. Audit trail — per-course log of every change
18. What Course Managers cannot do (deliberate role boundary)
19. Common questions
20. Where to look next

1. What a Course Manager owns

The Course Manager is the operational owner of the catalog. Every course, every session, every certificate, every rating passes across the manager's desk at some point in its lifecycle.

A manager's day breaks down into five recurring loops:

Loop	Trigger	Typical action
Course approval	An instructor submits a draft for review	Open the draft, walk the checklist, either approve for activation or send back with a change note
Material approval	An instructor uploads a video, slide deck or handout	Open **Content Review**, inspect the WCAG and NELC checklist, approve, reject or request changes
Certificate approval	A student completes a course and CME becomes claimable	Open **Certificates**, verify attendance and grade, approve for PDF issue or hold with an audit note
Review moderation	A student rates a course or instructor	Open **Reviews**, decide whether the rating is genuine feedback, then approve, reject, publish or delete
Operations	A cancellation, a scheduling conflict, a struggling student, a substitute instructor	Use **Sessions** or **Instructors** to keep the calendar unbroken

Managers see only courses they own by default. Server-side scoping enforces this at the database layer (`managerId = user.id`), so the workspace stays focused even when the catalog grows.

---

2. The Manager sidebar at a glance

The manager dashboard lives at `app.physioguidance.org/en/dashboard/manager`. The left sidebar shows thirteen sections in this exact order:

#	Section	What lives here
1	**Dashboard**	KPIs, catalog widget, embedded queues, upcoming sessions
2	**Courses**	Every course you own with full lifecycle controls
3	**Sessions**	Calendar of every Zoom and webinar session across your courses
4	**Instructors**	Roster with load status, performance drilldowns, suggestions
5	**Content Review**	Queue of materials awaiting sign-off with a red-badge count
6	**Assessments**	Assessment CRUD, question banks, grading, overrides
7	**Certificates**	Approve, reject, hold, revoke, batch, bilingual PDF download
8	**Reviews**	Course and instructor rating moderation
9	**NELC Compliance**	Per-course NELC scorecards and audit CSV export
10	**Reports**	11 report types plus scheduled reports
11	**Support**	File tickets and read threads you are looped in on
12	**Looped In**	Tickets where another team needs your input
13	**Settings**	Profile, security, notification preferences

The **Content Review** entry carries a red badge that shows the count of pending materials — clear the badge daily.

---

3. Manager Dashboard

The dashboard is designed so a manager can act on the four highest-frequency tasks without leaving the page.

KPI row

Four cards at the top of the page:

Card	What it shows
Active courses	Courses currently in Active status that you own
Enrolled students	Distinct students enrolled across your active catalog
Sessions this week	Zoom and webinar sessions scheduled in the next seven days
Pending certificates	Certificates waiting for your approval decision

Embedded widgets

Below the KPI row, five embedded widgets each pull live data and let you act in place:

1. **Catalog widget** — every course you own with an inline action menu to **Activate**, **Deactivate** or **Mark Completed**.
2. **Content Review queue preview** — top five materials waiting for approval with **Approve**, **Reject**, **Request Changes** buttons.
3. **Certificate approval queue** — pending certificates with **Approve** and **Hold** buttons for batch action.
4. **Upcoming sessions** — next seven days of Zoom and webinar sessions across your courses with an **Open in Sessions** link.
5. **Instructor load** — colour-coded roster showing which of your instructors are overloaded, balanced or free for new work.

Reviews overview

At the foot of the dashboard, a compact reviews panel shows the average rating for your catalog, the number of pending review moderations and a link to the full **Reviews** page.

Backend endpoints used by this page

For transparency and auditing, the dashboard is composed from these read-only calls:

- `GET /instructor/dashboard-summary`
- `GET /courses`
- `GET /instructor/roster`
- `GET /courses/ratings/all`
- `GET /courses/ratings/manager-stats`
- `GET /materials/pending-review`

---

4. Courses — the full workspace

Courses is the largest section of the Manager dashboard. It lists every course the manager owns and hosts the full lifecycle of each.

Course list

The list supports the same filter set as the instructor view — status, delivery type, category, search — plus a manager-only filter for **approval state** so you can jump straight to "waiting on me".

Course detail — the tab set

Opening a course reveals seven tabs:

Tab	Contents
Overview	Metadata, cover image, category, price, capacity, delivery type, current lifecycle state
Modules & Materials	Full module tree with reorder, add, edit, delete controls
Enrollments	Enrolled students, waitlist, attendance summary, manual-enroll and remove tools
Assessments	All assessments attached to the course with grading queues
Sessions	Every session for the course with join links, attendance state, rescheduling controls
Reviews	Student and instructor ratings for this course
Audit log	Per-course log of every state change, who did it, when

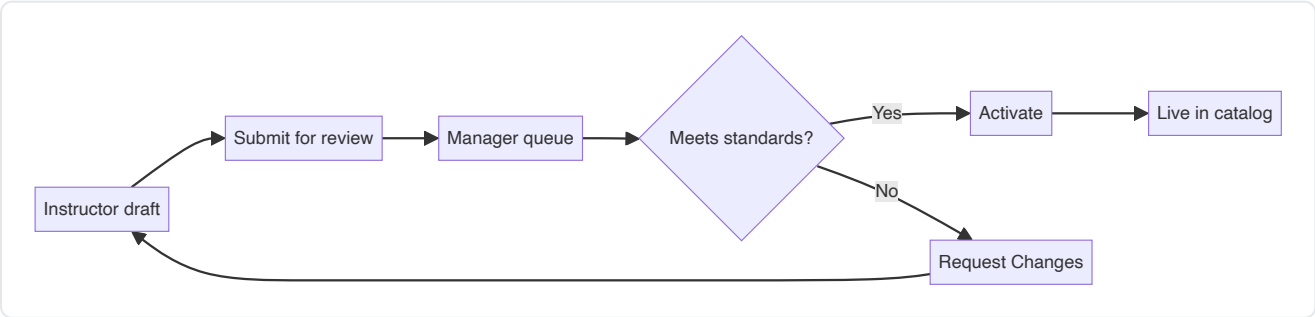

Course lifecycle transitions

The manager owns the full lifecycle. These are the transitions available and the button they map to:

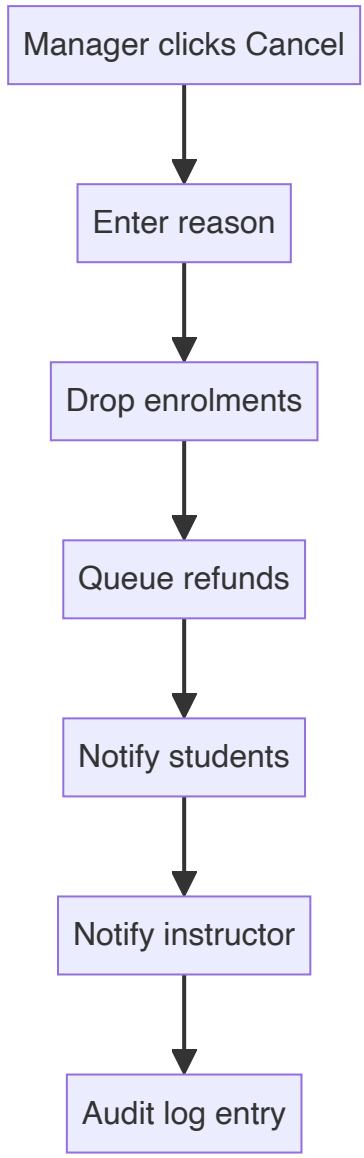

Transition	Button	Effect
Create	New Course	Creates a fresh draft owned by the manager
Duplicate	Duplicate	Copies an existing course as a new draft
Edit	Edit	Modifies metadata, cover, category, capacity, price
Submit for review	Submit for review	Moves an instructor-created draft into the manager queue
Request changes	Request Changes	Sends the draft back to the instructor with a comment
Activate	Activate	Publishes the course, opens enrollment
Deactivate	Deactivate	Removes the course from the public catalog while preserving all data
Feature on homepage	Feature	Adds the course to the featured strip on the marketing site
Assign or reassign instructor	Assign instructor	Changes the instructor of record on the course
Cancel	Cancel with reason	Cascades student refunds and notifications
Reschedule	Reschedule	Shifts start and end dates and revives sessions
End	End	Locks new enrollment when the calendar phase finishes
Mark Completed	Mark Completed	Releases certificates, CME credits, xAPI statements and enables reviews
Delete impact preview	Delete	Shows students, sessions and materials that would be affected
Delete	Delete	Available for draft courses you own — permanent

Mark Completed is the release lever. Nothing downstream fires until you press it. Students see their pass mark, certificates become claimable, CME credits register in the transcript, xAPI statements ship, and the review window opens.

Course review and approval flow

Course cancellation cascade

Ratings on a course

Every course has both student ratings and instructor ratings. Managers can view, approve, reject, publish, unpublish and delete either kind from the **Reviews** tab or from the dedicated **Reviews** sidebar section.

Endpoint patterns:

- `GET /courses/:id/ratings/manager-view`
- `POST /courses/:id/ratings/:ratingId/approve`
- `PATCH /courses/:id/ratings/:ratingId/publish`
- `DELETE /courses/:id/ratings/:ratingId`
- `POST /courses/:id/instructor-ratings/:ratingId/approve`

- `PATCH /courses/:id/instructor-ratings/:ratingId/publish`
- `DELETE /courses/:id/instructor-ratings/:ratingId`

Modules

Within the **Modules & Materials** tab, managers can add, edit, delete and reorder modules on any course they own, including courses assigned to an instructor. Reorder uses drag-and-drop and calls `PATCH /courses/:id/modules/reorder`.

---

5. Sessions — calendar, conflicts and substitutions

Sessions is where the manager oversees the live-teaching calendar. The page opens on a two-week grid with today highlighted and a toggle for **List** view or **Calendar** view. The calendar supports both **Hijri** and **Gregorian** month labelling.

What every user can do here

For any session on your calendar:

- **Create** a new Zoom or webinar session (`POST /sessions`)
- **View** today's or upcoming sessions
- **Update** time, capacity, joinable window
- **Start** and **End** the session
- **Finalize** attendance
- **Cancel** with reason
- **Sync Zoom** to re-pull the latest Zoom state
- View **attendance logs**
- **Share** or **unshare** session materials

Manager-only elevated actions

The following are available to managers and admins only. Instructors cannot use them:

Action	Purpose	Endpoint
View session conflicts	See where two of your instructors are double-booked	`GET /sessions/conflicts`
Instructor load	See the load count for one instructor	`GET /sessions/instructor-load/:instructorId`
Two-week schedule	Pull an instructor's calendar for the next 14 days	`GET /sessions/instructor-schedule/:instructorId`
Delete session	Permanent removal of a session record	Delete on session detail
Cancel on behalf of instructor	Cancel a session when the instructor is unreachable	`POST /:id/cancel-on-behalf`
Reschedule	Move a session to a new time	`POST /:id/reschedule`
Assign substitute instructor	Swap the teaching instructor on a specific session	`PATCH /:id/assign-substitute`
Reconfigure webinar questions	Edit the registration questions on a webinar-type session	Webinar tab on session detail

Webinar helpers

For webinar-type sessions the manager can:

- View registrants — `GET /:id/registrants`
- Start as host — `GET /:id/webinar-start`
- Check the workspace webinar licence — `GET /zoom/check-webinar-license`

Session assistants

If a session needs one or more session-level teaching assistants, the manager can list them, assign new ones and remove existing ones. These are session-scoped; course-scoped TAs are handled in **Course Assistants**.

---

6. Instructors — roster, load and performance

The **Instructors** section is the manager's people-management console. It draws every instructor available for course assignment.

Roster view

The default page lists every instructor on the platform with a colour-coded load pill:

Colour	Meaning
Green	Available capacity for new courses
Amber	Balanced load — take on with care
Red	Overloaded — do not assign more work without discussion

Endpoint: `GET /instructor/roster`.

Instructor detail

Clicking into an instructor brings up:

- **KPIs** — active courses, students taught, average rating
- **Courses** — every course they own or have owned
- **Reviews** — full rating history with moderation state
- **Two-week schedule** — every session in the next 14 days
- **At-risk students** — students in danger of failing CME under this instructor

Endpoints:

- `GET /instructor/:id/performance`
- `GET /instructor/:id/reviews`

Suggestions

When you need to assign a course but do not know who has capacity, use **Suggestions** — the platform picks the least-loaded qualified instructor.

Endpoint: `GET /instructor/suggestions`.

At-risk students across the whole catalog

The **At-Risk** tab shows students across all your courses who are close to failing attendance or grade thresholds. From here you can trigger interventions and schedule make-up sessions.

Endpoint: `GET /instructor/at-risk`.

Instructor list source

The dropdown pickers used elsewhere (course assign, session substitute, etc.) pull from `GET /auth/instructors`.

7. Content Review — the material approval queue

Content Review is the queue of instructor-uploaded materials awaiting sign-off. The sidebar badge shows the pending count.

The queue

Each row shows the material, the course it belongs to, the instructor who uploaded it, the upload date, and the current review state.

Actions

Per material:

Action	Effect	Endpoint
Approve	Publishes the material into the course module	`PATCH /materials/:id/review` with approved state
Reject	Removes the material with a rejection comment	`PATCH /materials/:id/review` with rejected state
Request Changes	Returns the material to the instructor with a change note	`PATCH /materials/:id/review` with changes-requested state
Delete	Permanent removal with reason	`DELETE /materials/:id`

Bulk action for the whole queue:

- **Bulk review** — approve, reject or request changes across many selections at once — `POST /materials/bulk-review`

The compliance checklist

Every material carries a WCAG and NELC compliance checklist that the manager inspects before deciding. This checklist covers accessibility (captions, transcript, alt text, colour contrast) and NELC content policy.

Endpoint: `GET /materials/:id/compliance-checklist`.

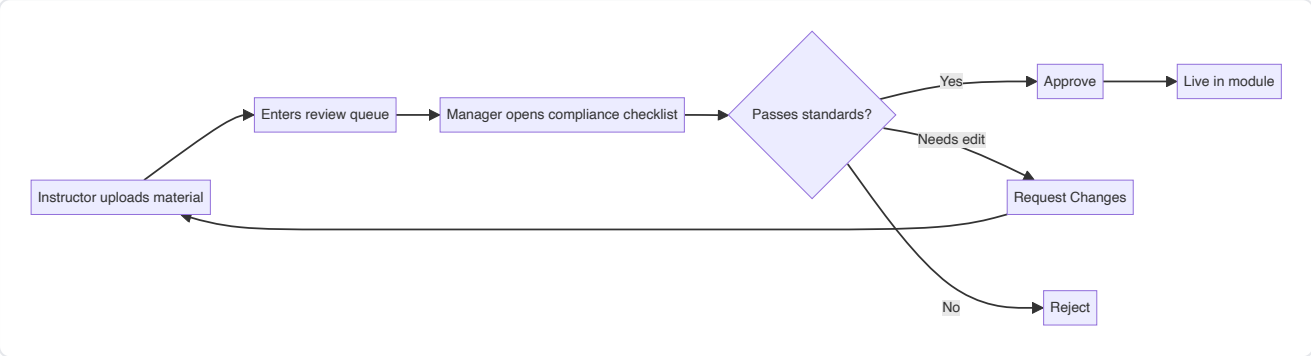

Shared reads with the instructor

These endpoints power the material detail view and are available to both the instructor who uploaded and the manager reviewing:

- `GET /courses/:id/materials`
- `GET /materials/:id/status`
- `GET /materials/:id/variants`

- `GET /materials/:id/watch-analytics`
- `GET /materials/:id/captions`
- `GET /materials/:id/versions`

Content review flow

---

8. Assessments — question bank, grading and overrides

The manager holds full assessment authority across every course they own.

Assessment CRUD

For each course:

- **Create** an assessment (formative or summative)
- **List** all assessments on the course
- **Read** any assessment
- **Update** metadata, timings, weight, pass mark
- **Delete** an assessment

Question bank

Every course has its own question bank. Managers can add, edit and remove questions from the bank and re-use them across multiple assessments.

Endpoints:

- `GET /assessments/course-bank/:courseId/questions`
- `POST /assessments/course-bank/:courseId/questions`

Grading

Manager grading is done from the submission list:

- `GET /:id/submissions` — list every submission
- `PATCH /:id/submissions/:submissionId/grade` — grade an MCQ submission
- `PATCH /:id/submissions/:submissionId/grade-assignment` — grade an assignment upload

Files

Managers can upload and delete files attached to an assessment (spec sheets, rubrics, marking guides).

Analytics

Every assessment carries an **item analysis** view showing per-question difficulty distribution — how many students got each question right, wrong or skipped, and a discrimination index.

Blueprint coverage

Per course, the **Blueprint** view maps assessment questions against learning outcomes. Managers use this to confirm assessment coverage matches the course syllabus.

Endpoint: `GET /assessments/blueprint/:courseId`.

Manager-only levers

Four levers are available to the manager and only the manager. They cover the exception cases that always arise on a live catalog.

Lever	When to use it	Endpoint
Flag assessment for review	You spot a broken or ambiguous question	`POST /:id/flag`
Emergency student override	A student's grade needs a manager override — medical, technical, exceptional	`POST /:id/override`
List overrides	Audit every override on an assessment	`GET /:id/overrides`
Grant retake to a specific student	Genuine reason to allow one student a fresh attempt	`POST /:id/allow-retake`

Every override is logged in the course audit trail with the manager identity and the reason string.

---

9. Enrollments — manual add, remove and waitlist

Enrollment management lives inside the course detail page, on the **Enrollments** tab. There is no dedicated Enrollments page in the sidebar — everything is scoped to a single course.

The enrollments table

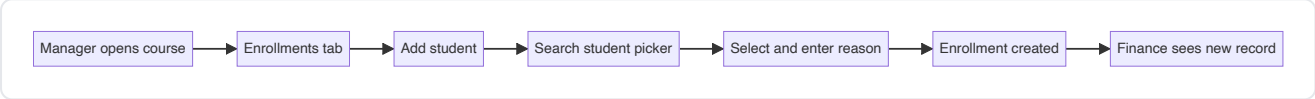

Shows every enrolled student, enrollment date, source (self-purchase, manual, coupon), attendance percentage, current grade and completion state.

Manual enroll

For the times when a student needs to be added outside the standard purchase flow — invoiced enterprise learners, complimentary seats, corrected duplicate accounts.

- **Manual-enroll** bypasses capacity and waitlist checks by design
- A **reason** field is required and is stored on the enrollment record
- Endpoint: `POST /courses/:id/manual-enroll`

Manual enrollment flow

Remove enrolled student

Removing an enrolled student is a manager-only action. A reason is required, because the finance team reads it when deciding on refund eligibility.

- Endpoint: `DELETE /courses/:id/enrollments/:studentId`

Waitlist

If a course is at capacity, new interest lands on the waitlist. Managers can view the waitlist and remove entries.

- `GET /courses/:id/waitlist`
- `DELETE /courses/:id/waitlist/:entryId`

Attendance

Attendance CRUD is available for every session on the course. Bulk attendance import is supported for large classes.

- `GET /sessions/:id/attendance`
- `POST /sessions/:id/attendance` for a single record
- Bulk endpoint for many records at once
- `PATCH /attendance/:id` for corrections

Student picker

The student search dropdown used inside the manual-enroll modal is powered by `GET /auth/students-search`.

---

10. Certificates — approve, reject, hold, revoke, batch

Certificates is a dedicated sidebar section because certificate work is high-frequency and needs its own filter set.

The list

Filters: course, status, search string, manager id. Manager scoping is enforced server-side, so the list only shows certificates on courses you own.

Actions per certificate

Action	Effect	Endpoint	Role
Approve	Generates the bilingual PDF and marks the certificate issued	`PATCH /certificates/:id/approve`	Manager, Admin
Reject	Records a rejection with note; student can appeal	`PATCH /:id/reject`	Manager, Admin
Hold	Freezes the certificate pending clarification, with audit note	`PATCH /:id/hold`	Manager, Admin
Revoke	Withdraws an already-issued certificate for cause	`PATCH /:id/revoke`	Manager, Admin
Download PDF	Bilingual EN or AR download	`GET /certificates/:id/download?lang=en` or `?lang=ar`	Manager, Admin

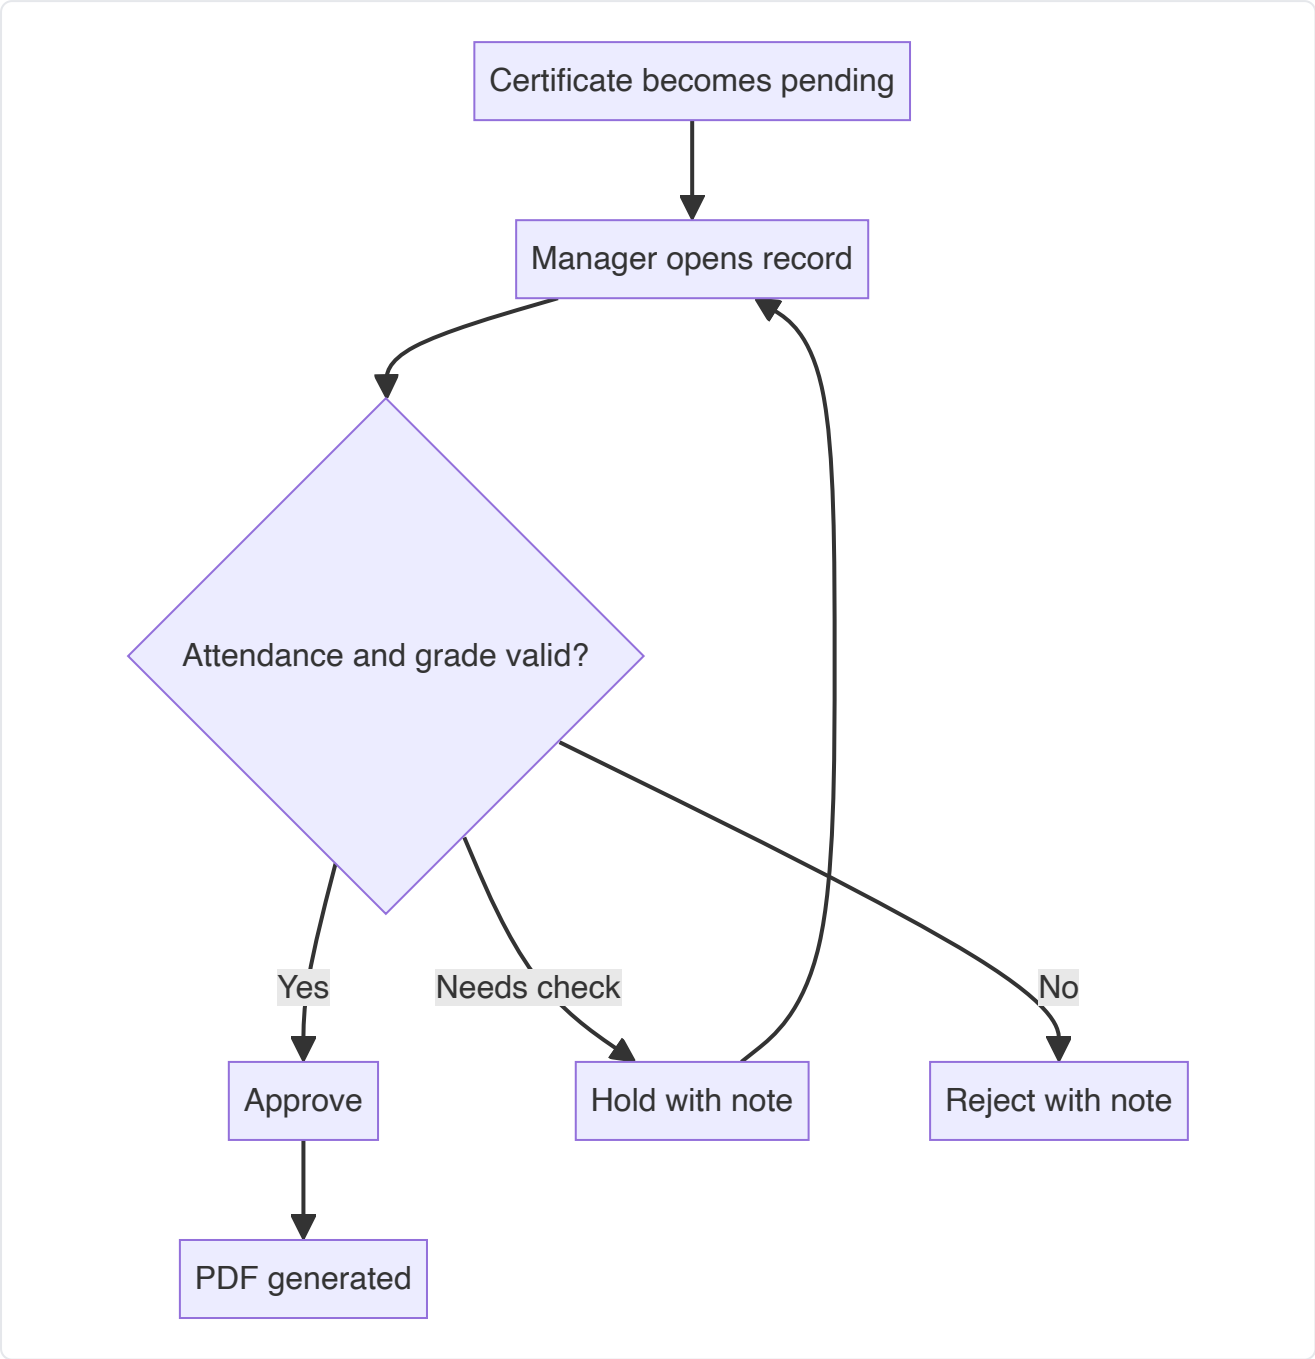

Revoke is intentionally locked to managers and admins. Instructors cannot revoke.

Batch operations

For end-of-cohort work:

- **Batch approve, reject or hold** — `POST /certificates/batch`
- **Batch download as ZIP** — `POST /certificates/batch-download` — one archive containing every selected certificate in the selected language

Manager decision flow

Revoke is a separate decision made after issue when new information arrives — for example a plagiarism finding.

---

11. Reviews — course and instructor moderation

The **Reviews** sidebar section is a dedicated moderation console spanning every course you own.

Two review types

The page flips between:

- **Course reviews** — student ratings of the course itself
- **Instructor reviews** — student ratings of the teaching instructor

The same actions apply to both:

Action	Effect
Approve	Marks the rating as approved for publication
Reject	Rejects with reason, hides from public view
Publish toggle	Toggles the rating between visible and hidden
Delete	Permanent removal

Per-course view is also available at `/courses/[courseId]/reviews` and inside the **Reviews** tab of the course detail page.

Overview stats

The manager stats endpoint `GET /courses/ratings/manager-stats` powers the overview panel: average rating across your catalog, count by star band, pending moderations, published count.

---

12. NELC Compliance — scorecards and audit export

The **NELC Compliance** section holds per-course NELC scorecards. NELC is the National e-Learning Center, the Saudi regulator that accredits every course delivered on the platform.

Scorecard structure

Each course is scored across five NELC standards:

Standard	What it checks
Course structure	Learning outcomes, credit hours, module sequencing
Accessibility	Captions, transcripts, alt text, keyboard navigation, colour contrast
Virtual classes	Zoom controls, attendance capture, host presence
Assessment quality	Item difficulty, discrimination, blueprint coverage
Instructor qualifications	Credentials on file, CV, licence numbers

Each standard expands to show every check and the failing detail if any.

Audit CSV export

For the annual NELC review the manager can export the full audit as CSV:

- Endpoint: `GET /nelc-audit/export`

The CSV is one row per course-standard-check with pass or fail state and the failing detail where relevant.

---

13. Reports — 11 report types and scheduled exports

Reports is the analytics console for the manager's catalog. Eleven report types are available.

Available reports

Report	Contents
Attendance	Session attendance rates across courses
Gradebook	Every student grade across every assessment
Enrollment	Enrollment counts by course, category, delivery type
Completion	Completion rate by course and by cohort
CME eligibility	Students on track for CME credit and those at risk
Webinar registrants	Registrant list per webinar session
Satisfaction	Course and instructor rating summaries
Instructor performance	Load, completion rate, satisfaction, on-time delivery
NELC compliance	Compliance state across your catalog
Course catalog	Full catalog dump with lifecycle state
Revenue	Revenue by course, category and instructor — Manager and Admin only

Export table

Any report on screen can be exported. The button calls `POST /instructor/reports/export-table` and returns a downloadable file.

Scheduled reports

The scheduled-report CRUD lets managers set up reports to run and email themselves or a distribution list on a cadence.

- `GET /scheduled` — list existing schedules
- `POST /scheduled` — create a schedule
- `PATCH /scheduled/:id` — edit
- `DELETE /scheduled/:id` — remove

Cadence choices: daily, weekly, monthly.

---

14. Support — filing tickets, being looped in

The **Support** section covers the manager's own interaction with the support desk.

File a ticket

Managers can open support tickets. The default category is `course_approvals` because that is the highest-volume topic for this role, but every category is available.

Ticket lifecycle:

1. Create — pick category, title, describe
2. Wait — support agent responds
3. Reply — thread the conversation
4. Rate — 1 to 5 stars on close

Read and reply

Managers can read and reply on any ticket they created.

Looped In

The **Looped In** sidebar entry lists every ticket where a support agent has added the manager as a collaborator — usually because course-manager input is needed to resolve a student issue.

Managers can post replies on looped-in tickets but do not own them.

What is not in this section

Everything that belongs to the support back-office — agent inbox, macros, KB writes, SLA analytics, CSAT dashboards, category admin, team supervision — is scoped to the SUPPORT role and does not appear in the Manager sidebar.

---

15. Settings — profile, security and notifications

The **Settings** section has three tabs.

Profile

Field	Notes
Name	Display name
Arabic name	For bilingual display and certificates
Avatar	Profile picture used across the platform
Phone	Contact number, used for OTP if enabled
Preferences	Language, timezone, calendar system (Hijri or Gregorian)

Security

Control	Purpose
Change password	Standard rotation
Two-factor authentication	Enable, disable, view recovery codes
Trusted devices	List and remove devices you have marked trusted

Notifications

Two master toggles:

- **Email notifications** — on or off
- **In-app notifications** — on or off

Finer-grained per-event preferences can be added via the platform preferences endpoint if needed later.

---

16. Course Assistants (TAs) — attach, rank, remove

Course-scoped teaching assistants are managed from within the course detail page. Session-scoped TAs are handled in the **Sessions** section.

Actions

Action	Effect	Endpoint
Attach	Add a user as a TA on the course	`POST /courses/:courseId/assistants`
Approve	Confirm the TA assignment	`PATCH /courses/:courseId/assistants/:userId/approve`
Reject	Turn down a TA request	`PATCH /courses/:courseId/assistants/:userId/reject`
Rank priority	Set the order in which TAs appear and are routed	`PATCH /courses/:courseId/assistants/:userId/priority`
Remove	Detach the TA from the course	`DELETE /courses/:courseId/assistants/:userId`

Ranking controls which TA takes precedence when routing questions to instructors, and the order of display on the public course page.

---

17. Audit trail — per-course log of every change

Every course carries an **Audit log** tab on its detail page. The log is a chronological record of every state change, every material approval, every rating moderation and every enrollment adjustment.

Fields per entry

Field	Meaning
Timestamp	ISO datetime, timezone-aware
Actor	The user who took the action
Action	The state change or endpoint name
Before / After	The state before and after where applicable
Reason	Free-text reason if the action requires one

Endpoint: `GET /audit-logs?entityType=course&entityId=:id`.

The audit trail is the primary evidence source for NELC and PDPL audit questions — every regulated action leaves a trace here.

---

18. What Course Managers cannot do (deliberate role boundary)

This section is deliberately explicit. Managers hold significant power inside the catalog; the boundary lines are drawn to keep security and compliance clean.

User management belongs to Admin

Managers cannot:

- Create, edit or delete users
- Assign or change roles
- Manage another user's trusted devices

These are Admin-only capabilities.

Trainer applications belong to Admin

The role-request workflow — approve, reject, request-info on trainer applications, and the blocked-national-ID list — is scoped to Admin and Super Admin. Managers have no trainer-application capability.

Support back-office belongs to Support

Managers cannot access:

- The agent inbox
- Macros and canned responses
- Knowledge base writes
- SLA analytics
- CSAT dashboards
- Category CRUD
- Team supervision

These are Support and Admin capabilities.

Admin-only modules

The following sidebar sections do not appear for managers because they are Admin-scoped:

- Admin notifications
- Admin settings
- Admin statistics
- Backups
- Error monitoring

- Health
- Monitoring
- Payments
- PDPL console
- Points
- Processing queue
- Scheduled maintenance
- Service status
- Site settings
- Storage admin views
- Tasks
- Templates
- xAPI admin views

Course deletion — draft only for managers

Managers can delete draft courses they own. Deleting a non-draft course requires Admin.

Finance audit endpoints belong to Finance

The finance audit endpoints are scoped to the Finance and Admin roles. Managers see revenue reports but do not see the finance audit trail.

---

19. Common questions

Q. A student says they attended a session but the system shows them absent. What do I do? Open the session, go to **Attendance**, find the student and correct the record via `PATCH /attendance/:id`. The correction is stamped in the audit trail with your identity.

Q. An instructor is unreachable and their session is in one hour. How do I cover? Open **Sessions**, open the session, click **Assign substitute instructor**, pick from the roster. If the substitute cannot be found in time, use **Cancel on behalf** with a reason.

Q. A student appeals a rejected certificate. What is the flow? Open **Certificates**, find the record, verify the underlying attendance and grade. If the appeal is valid, **Approve**. If further review is needed, move to **Hold** with an audit note explaining the appeal.

Q. How do I give one student a retake without opening the assessment to everyone? Open the assessment, use **Grant retake** (`POST /:id/allow-retake`) and select the student. Enter the reason. Only that student sees a fresh attempt.

Q. A course is at capacity but an enterprise client needs to add three more staff. Can I bypass the cap? Yes. Open the course, go to **Enrollments**, use **Manual enroll** with a reason. Manual enroll bypasses capacity and waitlist checks by design.

Q. I approved a material by accident. Can I undo? Open the material, click **Delete** with a reason. The removal is audit-logged. If the material needs to come back, the instructor uploads it fresh.

Q. How do I know an instructor is overloaded before I assign a new course? Open **Instructors** and look at the load pill. Green means capacity, amber means balanced, red means overloaded. If in doubt, use **Suggestions** to pick the least-loaded qualified instructor.

Q. A course review is clearly abusive. Can I remove it? Open **Reviews**, find the rating, click **Delete**. The removal is audit-logged with your identity and timestamp. Consider **Reject** with reason first if you prefer to preserve the record with a rejection note.

Q. Two of my instructors are booked at the same time for different courses. How do I catch this early? The **Session Conflicts** view (`GET /sessions/conflicts`) surfaces every double-booking across your catalog. Check it at the start of each week.

Q. How do I schedule a monthly enrollment report to email a distribution list? Open **Reports**, run the enrollment report to confirm content, then create a scheduled report with monthly cadence and add the distribution list emails.

Q. Where do I download the NELC audit for the annual review? Open **NELC Compliance**, click **Export**. The CSV is generated by `GET /nelc-audit/export` and covers every course, every standard, every check.

Q. Can I revoke a certificate that has already been issued? Yes. Open the certificate, click **Revoke** and enter the reason. Revoke is manager and admin only; instructors cannot revoke.

Q. Can I edit another manager's course? No. The default scope is your own catalog. Cross-manager visibility is an Admin capability.

Q. Can I approve a trainer application? No. Trainer applications go to Admin. If a candidate contacts you directly, forward them to Admin.

Q. Where is the delete-impact preview? On the course detail page, next to the **Delete** button. It calls `GET /:id/delete-impact` and shows every student, session and material that would be affected. Read it carefully before deleting.

---

20. Where to look next

Guide	When to open it
Admin Guide	For anything the manager cannot do — user management, trainer applications, admin-only modules, role assignments
Instructor Guide	To understand the instructor workflow you are approving — how they create courses, submit for review, upload materials, run sessions
Finance Guide	To understand how manager decisions flow into refunds, invoices and revenue reporting
Support Guide	To understand the ticket lifecycle from the Support desk's side, so your looped-in replies land well
NELC Compliance	For the deep detail on every NELC standard and the evidence expected against it
PDPL Compliance	For personal-data handling rules that apply to enrollments, attendance and certificates
