Final Ownership Confirmation

Point-by-point confirmation that every element of the PhysioGuidance platform is under client ownership and no production dependency remains on the developer's personal machine, GitHub, GCP, or vendor accounts.

PREPARED FOR
Amna, PhysioGuidance

PREPARED BY
Ghulam

DATE
2026-08-17

DEPLOYED COMMIT
`616a0341`

PHYSIOGUIDANCE
Riyadh · Saudi Arabia
me-central2 · GCP Cloud Run

Purpose

This document answers §18 of your review point by point. Each item is marked **Completed / Will Complete / Requires Client Action / Not Applicable** exactly per your vocabulary. Where "Will Complete" applies, the specific outstanding step is named.

---

1. All source code has been transferred

Status: Completed.

- Frontend, Backend (API + Worker), Strapi CMS, Infrastructure scripts, Malware scanner, GitHub Actions workflows — all committed and available in the client-owned repository.
- Repository: `github.com/physioguidance1-arch/physioguidance` (client-owned org).
- No local-only branches or uncommitted production files exist on the developer's machine. Verified via clean `git status` and cross-check against Cloud Run deployed commit `616a0341`.

2. All repositories have been transferred/shared with the client-owned GitHub account

Status: Completed.

- The monorepo containing all code is in the `physioguidance1-arch` GitHub organisation (client-owned).
- Access: Amna already has Owner-level access to the organisation.
- Developer's personal `GHULAM-1` fork exists as a working copy; it can be revoked at any time without impacting production, since CI/CD deploys from the client-owned org.

3. All deployment scripts have been transferred

Status: Completed.

- Every deploy script lives under `infra/` inside the repository (`infra/backend/deploy.sh` , `infra/frontend/deploy.sh` , `infra/worker/deploy.sh` , `infra/strapi/deploy.sh` , `infra/malware-scanner/deploy.sh` , `infra/config.sh` , `infra/scripts/*`).

- GitHub Actions workflows (`deploy-backend.yml` , `deploy-frontend.yml` , `deploy-worker.yml` , `deploy-strapi.yml`) invoke these scripts. No script depends on a file that exists only on a developer's machine.

4. All documentation has been delivered

Status: Completed.

- 32 code-verified handover PDFs, 4 CSVs (evidence matrices + third-party register + PDPL classification), 8 NELC screenshots, the least-privilege SA script, and privacy notice drafts — organised into 17 numbered folders under `PhysioGuidance-Handover/` , each folder mapping to one section of your review.
- Master index: README.md / 00-README.pdf.

5. All design assets have been delivered where applicable

Status: Requires Client Action.

- Design source files (Figma projects, editable logos, icons, illustrations, certificate design source, email template designs) were not held in the code repository.
- Placeholder folder: 04-missing-deliverables/design-assets/.
- **Client to do:** Please advise where the design source files are held, or provide them so they can be included in the handover.

6. All tutorial videos have been delivered as downloadable files

Status: Will Complete.

- Walkthrough videos currently exist as a Supercut share link (delivered separately).
- **Developer to do:** Export downloadable copies and place in 04-missing-deliverables/walkthrough-videos/. This is the last developer-side action.

7. All production configuration is under client control

Status: Completed.

- All environment variables and secrets live in GCP Secret Manager within the client-owned GCP project (`nelc-elearning-platform-479319`).
- No secret exists only on a developer machine.
- No secret is hard-coded in source code.
- `.env.example` files at each package root contain names and descriptions only; `.env` files are excluded via `.gitignore` .
- Any newly authorised developer with client-owned GCP + GitHub access can deploy without contacting the outgoing developer.

8. All required third-party accounts are under client ownership/access

Status: Completed for every account except one temporary developer IAM grant on GCP.

- Complete list in 15-third-party-services/third-party-services-ownership.csv. Every row shows the account owner, login email, and whether PhysioGuidance owns the account.
- Google Cloud, GitHub, Zoom, NELC LRS, Moyasar, Tabby, Tamara, Resend, Sentry, reCAPTCHA, OpenAI, DNS registrar, Google Tag Manager, Google Analytics 4, Meta Pixel — all listed with client ownership status.
- **One residual grant:** Ghulam's `cloudsql.admin` grant on the client GCP project was added temporarily for a backup restore drill on 2026-08-17. **Client to do:** Revoke this grant — one `gcloud projects remove-iam-policy-binding` command shipped in the handover message.

9. No production service depends on your personal computer

Status: Completed.

- CI/CD is fully repository-driven via GitHub Actions.
- All deploy scripts run inside GitHub-hosted runners using Workload Identity Federation (no JSON keys, no local secrets).
- Cloud SQL migrations run via `infra/scripts/migrate-production.sh` , which uses `cloud-sql-proxy` on any machine with the appropriate IAM role — not tied to the developer's laptop.
- Backup + restore drills use the standard `gcloud sql instances clone` procedure documented in 11-disaster-recovery/.

10. No production service depends on your personal GitHub / GCP / vendor account

Status: Completed.

- **GitHub:** Repository lives in the `physioguidance1-arch` org. Deploys use WIF, not personal PATs. Ghulam's personal GitHub account can be removed from the org after handover with no operational impact.
- **GCP:** All runtime uses per-service SAs (`api-runtime@`, `worker-runtime@`, `web-runtime@`, `strapi-runtime@`, `malware-runtime@`, `tasks-dispatcher@`, `reconciliation-cron@`). Ghulam's personal IAM identity has no runtime dependency; removing it does not affect any production traffic.
- **Vendor accounts:** Every listed account in 15-third-party-services/third-party-services-ownership.csv is on `amna@physioguidance.org` or `nelc.platform@gmail.com` (client-owned). Ghulam has developer-level access to Strapi during handover only; this can be revoked after sign-off.
- **Sentry alerts:** All monitoring alerts route to `nelc.platform@gmail.com`. Ghulam's personal email is not on any production alert channel.

11. Another qualified developer can operate and deploy PhysioGuidance independently using the handover package

Status: Completed.

- A newly authorised developer with:
  - Read/Write access to `github.com/physioguidance1-arch/physioguidance`
  - Editor (or task-appropriate) IAM on the GCP project
  - The developer machine set up per 16-documentation-consistency/developer-guide.pdf can pull the repo, push a change to `main`, and CI will build + deploy each service without any intervention from Ghulam.
- The rollback procedure (single `gcloud run services update-traffic --to-revisions=<name>=100` command per service) is documented in 16-documentation-consistency/ops-runbook.pdf.
- The 400-day log retention, monitoring dashboards, admin UI, and Sentry integration all work independently of the outgoing developer.

Summary of all remaining external steps

#	Item	Owner	Blocks handover sign-off?
A	Provide design source assets (§5 above)	Client	Yes — trivially completed once files provided
B	Export walkthrough videos as downloadable files (§6)	Developer	Yes — being completed
C	Revoke Ghulam's temp `cloudsql.admin` grant (§8)	Client	No — cosmetic; no operational impact if left
D	Upload SCFHS license to Moyasar → activate → file `MOYASAR_WEBHOOK_SECRET_LIVE`	Client + Moyasar	No — J1 test-mode currently PASS, no revenue impact
E	Six PDPL client/legal actions (see 08-pdpl-compliance/pdpl-controls-matrix.csv)	Client + Legal	No — technical implementation is Completed
F	Configure GCP Budget Alert (§13)	Client (owner-only)	No — cost-tally.pdf shows recommended threshold

Nothing on this list requires further code change from the developer beyond item B.

Statement

I confirm that, as of 2026-08-17 and deployed commit `616a0341`, every technical deliverable within the agreed contracted scope has been transferred to the client, verified against the production system, and documented in the handover package.

The only remaining developer-side action is item B (export walkthrough videos as downloadable files). Once that lands, the Final Handover milestone is ready for your approval.

Signed,

Ghulam — Developer 2026-08-17
